

EXCHANGE MIGRATION TO OFFICE 365

Accountancy firms rely on quality standards and supreme technical knowledge when it comes to Information Technology. Our client ensures that they provide the best service possible by updating their IT infrastructure over three sites every 2 – 3 years. Microsoft office licenses were due for renewal and they were looking to replace legacy Microsoft Exchange server.

Yellowspring were called in to review the current IT infrastructure and to advise on the most suitable option.

Customer Background

Our customer is one of the UK's leading London based accountancy firms providing progressive intelligent solutions to managed businesses, large corporations and public sector not for profit organisations.

Solution

Office 365 provides a fixed cost rental solution for Exchange email and MS Office licenses. Office licenses would be automatically renewed and upgraded by Microsoft without any additional charges this would mean that they would not have to renew office licenses as new versions are released.

Office 365 also provides a disaster recovery plan and cloud backup. In an event of internet failure users would still be able to work offline from mobile devices or from home as long as they had an Internet connection.

Our client has over 150 users and the volume of email, calendar, contact and task data was very large. The transition from the 'on premise' server to the hosted Office 365 environment required considerable planning and they were a number of obstacles to overcome such as the use of public folders within Office 365.

Business Benefit

Our client is confident in knowing that they have a reliable solution in place with minimal disruption from the installation. Having now acquired Office 365 the business efficiency has been increased as well as the ease of collaboration between the various sites.
